This course provides an introduction to the specifics of language structure and sets linguistics in its context within cognitive science. After a general introduction to the nature and structure of language, we study the various components of language such as speech sounds (Phonetics and Phonology), words and their internal structure (Morphology), phrases and sentence structure (Syntax), and the meaning of words and sentences (Semantics).

There will be additional one-hour-tutorials for groups of around 25 participants. Regular attendance is compulsory. Details will be arranged in the first week of term.

MO 11.30 – 13.00

11.91

This course deepens the syntactic analysis of English sentences as introduced in the course 'Introduction to Linguistics'. We will proceed through the different levels of description:

- the functional level like subject, object, etc.
- the thematic level like agent, theme, etc.
- the formal level: from word classes and phrasal categories to complete tree structures, and thereby we will deal with various syntactic phenomena, both on the phrasal and on the sentential level. The seminar has a strong practical focus; the students will learn to apply syntactic argumentation themselves.

The class introduces students to the basic concepts of phonetics and phonology and the distinction between them. The articulation and feature description of individual speech sounds will be covered in detail in order to acquire the ability to transcribe the heard sounds.

You will also be introduced to two major major variants of English pronunciation: General American (GA) and Received Pronunciation (RP).

MO 11.30 – 13.00

11.82

In this course we will first discuss basic semantic notions like the difference between sense and reference (e.g. the German chancellor vs. Angela Merkel), semantic classes of verbs/predicates, tense, aspect and modality. In the end we will be able to theoretically explain, for instance, why the English progressive is compatible with some verbs, but not with others: compare "John is driving a car" with "John is owning a car". In the second part of the course we will set the grounds for a formal approach to natural language semantics by determining the kind of objects words may refer to and how we can combine them to derive the interpretation of sentences. For this, we will introduce and make use of basic notions of set theory and predicate logic.

Blockseminar 14. – 19.02.2011

Raum: 17.25

09.00 – 17.00 Uhr

In the course of the seminar we will have a look at the highly interdisciplinary area of cognitive science – the science of how our mind and our brain work. The topics we will discuss come from a range of contributing disciplines: psychology, neurology, computer science, linguistics, anthropology and philosophy. We will e.g. try to explain how the brain works, what knowledge is and how it is represented, what types of memory we have, how we perceive things with our senses and how this can get distorted, where action and emotion come from, what the concept of consciousness means and also where and how language is produced.

MI 11.30 – 13.00

17.25

This course gives an introduction to the main tools and topics of (Generative) Syntax.

Its aim is to teach students

- a) the main principles of syntactic theory
- b) to identify different syntactic phenomena and
- c) how to build arguments out of these phenomena that lead up to theoretical proposals. The students should become able to relate data to theory and theory to data, thereby cultivating their skills of syntactic argumentation, i.e. to formulate and to test hypotheses.

The seminar on Dialectology consists of a theoretical and practical part. First, we will look at the importance of mechanisms and causes of language change, which lead to the formation of new dialects and eventually languages (geographical and sociological aspects are especially considered).

The second part will provide an overview of dialectal variation in the English, covering the British Isles, North America and the southern hemisphere (Australia, New Zealand, South Africa).

In this course we will see how syntactic theory can account for the ungrammaticality of sentences like the following:

- (1) *It seems syntax to be fascinating
- (2) *It is reluctant that Martin will do syntax.
- (3) *Who do you think that will pass the test?
- (4) *How do you wonder what we will discuss?

In short, we will discuss all kinds of movement phenomena, control theory, and empty categories. Moreover, we will be concerned with binding, theta and Case theory. Good basic knowledge of syntax is obligatory.

Typology

DI 11.30 – 13.00

17.12

Typology is a subdiscipline of linguistics and is concerned with cross-linguistic comparison; especially with the study of patterns that can be discovered (only) by cross-linguistic comparison. Typology tries to show both the unity and the diversity of the world's languages. In this course, we will look at the basic aims of typology, its history, methods of analysis and at its core assumptions. We will also investigate how languages can be grouped into types and we finally will take a look at the comparison and classification of some particular constructions.

Advanced Syntax

The aim of this seminar is to make students familiar with current syntactic developments. After introducing the core ideas of Minimalism, we will read and discuss recent syntactic literature. Good knowledge of syntax is therefore obligatory.

Tense and Aspect

DI 09.45 – 11.15

17.12

While Tense and Aspect both provide temporal information, they are distinct concepts. In this course we will investigate the properties and use of the aspectual and tense system of English in comparison to other languages. The focus of this class will be on the classification of aspectual verb classes, and various (recent) theoretical approaches to this topic will be discussed.

The Phonology-Morphology Interface

Credits: 7	Requirements: analysis exercises and final exam	BA-Leistungspunkte Anglistik: 6

Matthias JILKA

DO 15.45 – 17.15

11.62

As the name suggests this seminar deals linguistic phenomena in which morphology and phonology interact. The theory of Lexical Morphology, for example, explains the interdependence of morphological and phonological process in a hierarchical model of the lexicon. We will also have a look at Prosodic Morphology and other linguistic elements like clitics that also combine morphological and phonological characteristics.

Negation, Polarity, Negative Concord

Credits: 7	Prerequisites: good knowledge of syntax and semantics is needed; students should have attended at least an introduction to syntax and/or semantics.	BA-Leistungspunkte Anglistik: 6
Lehramt (alt): Hauptseminar	BA HF: Hauptseminar Sprachwissenschaft (Pr.Nr. 3300)	Master: Wahlmodul Linguistik / Spezialisierungsmodul 1 (Pr.Nr. 23441)

Gianina IORDACHIOAIA**DI 09.45 – 11.15****11.62**

In this course we will be concerned with the study of negation in natural language and two related phenomena: positive/negative polarity and negative concord. In particular, we will explain grammaticality contrasts like the one in (i) and interpretational contrasts like in (ii):

i. Nobody read any/*some book. vs. John read some/*any book.

ii. Nobody read nothing.

= 'Everybody read something.' (standard English)

= 'Nobody read anything.' (negative concord English)

For this we will investigate the syntactic and semantic properties of theoretical concepts like "negative quantifiers", "negative polarity items", "positive polarity items", and "n-words".

This course is divided into two parts. Part one consists of an introduction to the Old English language, including particular syntactic, morphological and phonological phenomena. In part two of the course we will translate, analyse and discuss Old English (prose) texts in class.
